	Urgent	**Not Urgent**
Important	**Do - (Your MVP)** ● Script that pulls data from the api ● App/website to choose which gear you want to be notified for ● Notification system that sends either email or phone notification	**Schedule - (For V2.0+)** ● Add filters to the search for gear ● 2. Allow users to create accounts and save their gear preferences. ● 3. Add a notification history so users can see previously found gear. ●
Not Important	**Delegate - (Use a library)** ● automatically retry failed API requests. ● parse and organize gear data from the API. ● validate user input when selecting gear preferences	**Delete - (Cut it)** ● Custom animations/art and transitions for the website. ● Social features like sharing gear wishlists with friends. ● Statistics tracking how often specific gear appears inthe shop.
